

CLICK 2 CLICK FACADE SYSTEM

Aslon Systems has designed a special facade- and decking system which, in combination with the clip and the steel beams, is the perfect solution for facade and terrace installations.

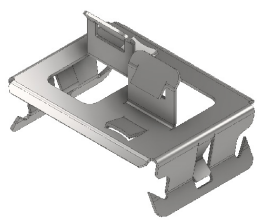

The clip is designed to be simple and clever, allowing easy installation onto the steel beams.

The design of the clip has a clever shape so that boards that have a groove on the underside can be pressed onto the clip. A barb secures the board into the groove of the notch, clicking it securely onto the clip. This ensures easy assembly with a very strong connection as the end result. This innovative approach saves time during installation.

Choose convenience, choose quality. Choose the clip by Aslon Systems - the ultimate solution for facade and decking installations..

THE COMPLETE CLICK 2 CLICK SYSTEM

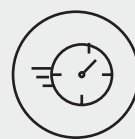

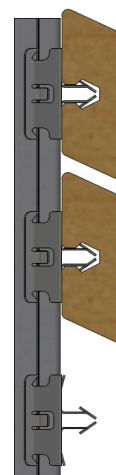

The clip

Steel profile front side

Steel profile rear side

CLICK AND READY

The clip has a clever shape, allowing boards with a groove at the bottom to be easily clicked onto the clip.

SCREWLESS

The clip's smart design allows easy installation of a facade or decking without the use of screws.

FIREPROOF

The Click 2 Click system is fire-resistant.
