

# F CLIP

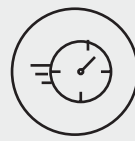

**The innovative solution for screwless and efficient facade and terrace installations.**

Aslon Systems has designed a special facade-terrace clip which, in combination with the substructure system, is the perfect solution for facade and terrace installations. The F Clip has been designed to facilitate fast and simple assembly. With its blind fastening, there's not a screw in sight.

The smart design of the F Clip means it can be easily installed on the girder by means of a click/hook system. Using the F Clip, decking boards with a groove on the underside can be pressed on to the clip. By means of a barbed clip, the board is inserted into the groove and easily clicks onto the F Clip. This ensures easy assembly with a super strong connection. With this smart system, you can save time during the installation.

The carefully designed F Clip is made of high-quality stainless steel, making it suitable for all building projects. Ideal for use with the matching steel girders with holes in the side into which the F clip can be securely fastened.

Choose convenience, choose quality. Choose the F Clip by Aslon Systems - the ultimate solution for facade and terrace installations.

## JUST CLICK

The smart F Clip enables decking boards with a groove on the underside to be pressed on to the clip.

## SCREWLESS

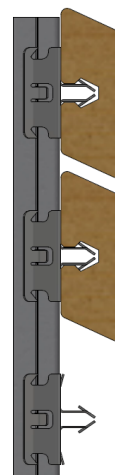

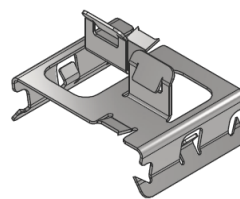

The clip's smart design allows easy installation of a facade or terrace without the use of screws.

## FIRE CLASSIFICATION

Due to the stainless steel composition, the F Clip has the correct fire classification.

F - CLIP
